# CAI6734 Week 7 Individual Progress Report

Testing in Imagination:
World-Model Planning for Language Agents
in Sequential Clinical Diagnosis

Daniel Escalante

Course: CAI6734 (University of Florida)
Advisor: Xuefeng Liu

October 13, 2026

This report covers my individual work for Week 7 (October 7–13, 2026). It was a light week for code: progress was mainly on data-access coordination while we wait for PhysioNet credentialing. I report only verified progress, with no made-up metrics and no PHI.

## 1 Progress this week

### 1.1 PhysioNet access coordination

- My PhysioNet credentialing application (CITI finished October 6; supervisor reference Xuefeng Liu) is still **pending**. I have not received approval, so I have not requested or downloaded MIMIC-IV-Ext CDM.
- Edwin Salcedo was approved for the dataset on October 6. PhysioNet requires every collaborator to be authorized, so the team cannot share data until Hugo and I are approved too.
- On October 8 I followed up with Hugo Resendez. He planned to finish CITI and submit his request by Friday, October 9. I also reminded him to accept the GitHub invitation to the project repository so all three of us can work in it.

### 1.2 Repository state

No new commits landed this week. `main` is still at the Week 6 state (`6a5b680`): the `lacdm/` scaffold with upstream LA-CDM pinned at `3f435a10`, the Nemotron Hydra overrides (D-5), and 83 passing Phase E unit tests. In `REPRODUCTION.md`, S1–S4 are unchanged.

## 2 Setbacks and how I addressed them

- **Data access is still gated.** Without my own PhysioNet credential I cannot run S2 `prepare_data`. Using Edwin's access to share data with me would violate the DUA, so I did not do that. Instead, I followed up with the team so all members can be authorized as soon as possible.

- **No GPU work possible.** My Mac has no CUDA and the HiPerGator path is not set up yet, so GRPO and vLLM runs remain deferred. I did not report any experiment numbers.
- **Limited implementation time.** I made no new code commits this week. I am treating the synthetic-data path as the next unblocked task.

## 3 Next steps

1. Check on my PhysioNet credentialing status and confirm that Xuefeng Liu's reference was submitted. Once approved, request MIMIC-IV-Ext CDM and sign its DUA.
2. Confirm Hugo's authorization request and his repository access.
3. Start the synthetic CDM data path under `extension/` (Edwin's suggestion) so the environment and Phase E tests can run end-to-end without PHI.
4. Set up a HiPerGator allocation and pin the Nemotron model there before the first cluster job.

## Notes

No Table 1 accuracy, F1, or cost figures are reported. They require PhysioNet-authorized data and CUDA runs that have not happened yet.
