

CAI6734 Week 6 Individual Progress Report

Testing in Imagination:
World-Model Planning for Language Agents
in Sequential Clinical Diagnosis

Daniel Escalante

Course: CAI6734 (University of Florida)
Advisor: Xuefeng Liu

October 6, 2026

This individual progress report covers my work for Week 6 on the Testing in Imagination / LA-CDM reproduction project. I write in the first person and report only verified progress—no fabricated metrics or PHI.

1 Progress this week

1.1 CITI / PhysioNet prerequisites

On 2026-10-06 I completed the CITI *Human Research – Data or Specimens Only Research* course (MIT Affiliates; Record ID 80147027; score 100%). This is a PhysioNet prerequisite. I have **not** yet downloaded any PhysioNet dataset.

I also started PhysioNet credentialing. My supervisor reference is Xuefeng Liu (xuefeng.liu@ufl.edu). The research-topic text I am using describes reproduction of MIMIC-IV-Ext CDM / LA-CDM for CAI6734 (Testing in Imagination).

1.2 LA-CDM reproduction scaffold

I built the `lacdm/` reproduction scaffold in our course repository:

- Upstream LA-CDM pinned as a submodule at commit `3f435a10`.
- Nemotron Hydra overrides for the CoC-compliant backbone (logged deviation D-5): `nvidia/Llama-3.1-Nemotr`
- Phase E unit tests: **83 passed** on my Mac (no CUDA required).

1.3 Git history cleanup and merge

I resolved a temporary local orphan / unrelated-histories situation by porting the `lacdm` content onto `origin/main` rather than merging unrelated histories. That work landed on `main` at commit `95ce5fc`.

Local working path. Documents/AIBHS/Applied Generative AI in Medicine/Testing in Imagination (private repo: <https://github.com/scalinity/testing-in-imagination>).

2 Setbacks and how I addressed them

- **Full Table 1 / GRPO blocked.** My Mac has no CUDA; PhysioNet credentialing is still pending; I need a HiPerGator path before any real GRPO or vLLM job. I kept progress on Mac-OK work (scaffold, Hydra overrides, Phase E tests) and documented the GPU/data gate rather than inventing run numbers.
- **Temporary local orphan git history vs GitHub.** Early local history diverged from `origin/main`. I fixed this by porting content onto `origin/main` (feat branch then merge) instead of an unrelated-histories merge, so `main` stays a single linear project history ending at 95ce5fc.

3 Next steps

1. Finish PhysioNet credentialing and request MIMIC-IV-Ext CDM; confirm authorization with Edwin and Hugo before any data prep that could involve PHI.
2. Pin Nemotron on HiPerGator; override any remaining Qwen Hydra defaults before the first cluster job (D-5).
3. After data access: run S2 `prepare_data` / smoke eval; meanwhile continue the synthetic CDM path under `extension/`.

Notes

No Table 1 accuracy, F1, or cost figures are reported this week—those require PhysioNet-authorized data and CUDA training/eval that I have not run. Repository stewardship and Mac-side Phase E verification are the deliverables I completed.
